AI Policy Overview

Colorado legislators have yet to prioritize policies regarding artificial intelligence. However, in 2020, the state enacted a law that established provisions for various government uses of facial recognition technology.

Facial Recognition

In 2020, the Colorado legislature enacted a law ([CO SB 113](#)) establishing provisions for government use of facial recognition technology. The law requires state and local agencies intending to use facial recognition technology to file a report stating their intent to develop or procure facial recognition technology and specify how they will use facial recognition. The law also requires agencies to develop a data management policy, establish testing procedures, and provide information on false identifications.

Legislative & Regulatory History

- **2020** - Colorado enacted [CO BS 113](#), which establishes provisions for government uses of facial recognition technology.
